- Troubleshooting
- Customer Service
- Teaching
- Developing Web Applications

Education

Full-Stack Web Developer
App Academy
2024-2025

Electromechanical Engineer Major
Temple University
2018-2019

About Me

I went from jail breaking iPods and emulating multiplayer enabled PSP games on my old dell laptop, to eventually teaching students how to use micro-controllers (Arduino). To this day, I provide freedom to the people around me with my skill set. Creating external value as opposed to in-game achievements. I'm currently designing the website for a social club along with creating a personalized application for a mechanic. You can track the progress on my GitHub and see other projects I've worked on as well.

Projects

Backbone
A social acoountability web app

Github Repo

NomNow
An UberEats Clone
